

DON'T JUST SAVE MONEY. MAKE MONEY.

When companies make a proactive decision to alter their energy consumption patterns during critical peak power usage periods, everyone benefits. The practice, called "demand-response curtailment," provides stability for the regional power grid, lessening the concern for potential blackouts (which hurt everybody) and financially benefiting the companies that participate in these valuable energy procurement programs.

Recent regulatory changes and power market conditions have spurred Regional Transmission Organizations, or RTOs, to deploy demand-response programs for commercial, industrial and institutional power users. Participants are asked to temporarily reduce their electric consumption or demand in return for financial incentives. This practice alleviates strain on the electric system. Alerts typically occur during peak periods or system emergencies and usually last between one and four hours. The reduction in electric consumption is generally achieved through load curtailment, existing energy strategies and/or operating generators.

While most demand-response programs peak during the summer months, there are opportunities to save year-round. These programs improve the efficiency and reliability of the electric infrastructure and provide participating companies with measurable financial benefits.

Enerwise's Information Command Center, or ICC, is dedicated to managing energy decisions 24/7 and offers participants a turnkey solution that handles regulatory, operational, metering, monitoring and notification requirements and makes participation easy. Enerwise is a member and curtailment service provider (CSP) for several Regional Transmission Organizations (RTOs), providing participants with the knowledge and experience necessary to proactively manage demand-response events and extract value from assets that are typically already in place.

Our program includes these features:

- Web-based tools designed to manage and settle demand-response events
- A real-time energy system that gives managers insight into critical data from multiple locations

- A centralized system that enables comparison of energy information, alarming and notification
- A manned operational center for 24/7 support
- A system that is intuitive and easy to use
- Turnkey DR solution from registration through the settlement process
- On-site assessment to assist in determining energy reduction strategies
- Self-schedule demand-response events directly with ISO/RTO
- Event reporting listing recent demand-response event notifications

Demand-response from Enerwise makes it easier than ever before to manage your company's energy and save money.

ABOUT ENERWISE

Enerwise Global Technologies, established in 1980, is a leader in demand-response, energy infrastructure management and renewable energy services for commercial, institutional and industrial customers. We enable customers to reduce energy costs, comply with increasingly demanding environmental regulations, take advantage of alternative power initiatives, increase operational security and improve reliability. We deliver responsive, well-tested energy solutions, ranging from remote power monitoring and control systems to energy history analysis and real-time demand-response solutions.

Our systems and staff work around the clock to make sure you're always running smoothly and efficiently. Other companies depend on us to solve their energy problems; let us help you with yours.

For more information, log on to our Web site at www.enerwise.com, call 800.307.3395 or e-mail sales@enerwise.com.
